## CASA TRAVERSO

The garden has two large areas, the main house and the guest house, which are linked by stairs. The basic idea was to generate a garden with a single style but with variants that will provide different aspects and some common elements. The architects created an urban cottage garden for the main house and a classical cottage garden in the guest house area. The pool is framed with *Cyperus papyrus* to give it a more exotic touch. The garden includes many flowering plants that add life throughout the seasons.
